## Vocabulary: Pythagorean Theorem with a Geoboard

## Vocabulary

- Converse - a statement formed by switching the hypothesis and the conclusion of a conditional statement.
- For example, the converse of the statement, "If it's a school day, then I get up at 6:00 a.m.," is, "If I get up at 6:00 a.m., then it's a school day."
- Hypotenuse - the side of a right triangle opposite the right angle.
- The hypotenuse is the longest side of a right triangle.
- Legs (of a right triangle) - the two sides of a right triangle that form the right angle.

- Pythagorean Theorem - a theorem stating that, for any right triangle, $a^{2}+b^{2}=c^{2}$, where $a$ and $b$ are the lengths of the legs of the triangle and $c$ is the length of the hypotenuse.
- Right triangle - a triangle that contains one right angle.
