## Student Exploration: Zap It! Game

Vocabulary: parabola, quadratic function

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)
The equation of the line shown is $y=2 x+3$.

1. If you wanted the line to intersect more points, how would you change the slope of the line? $\qquad$
2. How would you change the $y$-intercept? $\qquad$

## Gizmo Warm-up

In the Zap It! Gizmo, you will see how many points you can hit (or "zap") with a parabola by changing the values in a quadratic function. You can choose polynomial form, $y=$ $a x^{2}+b x+c$, or vertex form, $y=a(x-h)^{2}+k$.

With Polynomial form selected, be sure that the sliders are set to the default values: $\boldsymbol{a}$ to $1, \boldsymbol{b}$ to 0 , and $\boldsymbol{c}$ to 0 . (To quickly set a slider to a value, type the value in the box to the right of the slider and press Enter.)

1. Click Reset - random points. Then click Graph it! to graph $y=x^{2}$. The "zapped" points are in red.

A. How many points did this curve "zap"? $\qquad$
B. How do you need to change the parabola to zap more points? $\qquad$
$\qquad$
2. Click Keep trying. Drag the sliders, and click Graph it! How many did you zap now? $\qquad$
Keep trying! The goal is to zap as many points as you can, in as few attempts as possible.
To start a new game, click either Reset - random points or Reset - perfect fit.

| Activity A: <br> Polynomial form | Get the Gizmo ready: | - |
| :---: | :---: | :---: |
|  | - Be sure Polynomial form is selected. <br> - Click Reset - random points. | $\because$ |

1. Play the "Random points" game several times. Record how many points you zap each time.

| Game | Attempt 1 | Attempt 2 | Attempt 3 | Attempt 4 | Attempt 5 | Most <br> zapped |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |

2. Click Reset - perfect fit. In this game, you can actually zap all 10 points. The challenge is, how many tries will it take you to zap all 10? (Note: The points in the Gizmo are "fat" so there are several different graphs that will zap all 10 points.)

Game 1: It took $\qquad$ attempts to zap all 10 points.

Game 2: It took $\qquad$ attempts to zap all 10 points.

Game 3: It took $\qquad$ attempts to zap all 10 points.

Game 4: It took $\qquad$ attempts to zap all 10 points.

Play the "perfect fit" game several more times, in Polynomial form mode. What's your best score (fewest attempts to zap all 10 points)? $\qquad$
3. The parabola graphed here is $y=x^{2}(a=1, b=0$, and $c=0)$. How would you change the values in $y=a x^{2}+b x+c$ to zap more points? Explain why.
