

Vocabulary: Measuring Motion

Vocabulary

- Distance – the measure of how far apart objects are.
 - Metric units for distance include millimeters (mm), centimeters (cm), meters (m), and kilometers (km).
- Speed – how fast an object is moving.
 - Speed is distance traveled per unit of time.
 - To calculate speed, divide distance by time.
 - Speed can be expressed in units such as meters per second (m/s), kilometers per hour (km/h), or miles per hour (mph).
